

Cyber Security

Agencies involved in critical infrastructure, high-tech, financial, and intelligence operations are constant targets of cybercrime and other advanced threats. These agencies need to implement capabilities to have continual visibility into potential attacks and compromises. Agencies facing significant threat need to take additional measures to harden their environments beyond the average organization's standard security procedures.

IT Vigilance & Resiliency

iConsult's detail-oriented approach helps agencies take the necessary defensive (and when necessary, offensive) security measures:

- ✓ **Infrastructure Vulnerability Avoidance**
 - + Hardening the Infrastructure with High-Priority Security Controls
 - + Securing Data (at rest and in motion)
 - + Effective Change Control / Configuration Management
- ✓ **Intrusion Prevention / Detection**
 - + Situational / Environmental Awareness
 - Continuous Diagnostics & Monitoring
 - Proactive Exception Monitoring
 - + Managing Insider Threats via a Comprehensive Identity Management Strategy
 - Protecting Data, even from Administrators
- ✓ **Incident Response**
 - + Root Cause / Forensics Analysis
 - + Disaster Recovery & COOP
 - + Offensive Strategies / Counter-measures

Threats will always infiltrate defensive measures. The key is avoiding as many attacks as possible, and rapidly reacting to those that just can't be avoided.

iConsult's broad and deep expertise stems from over 40 man-years of helping organizations, both government and industry, implement strategic programs to achieve their goals.
